Module Navigation

Use the top banner to navigate around the module. A footer bar with “Next” and “Back” button can also be used to move through the System Setup to the Report.

Main Tabs

System Basics – Establish your baseline by entering the existing data for your compressed air system.

Assessment – Modify system scenarios to find potential savings opportunities.

Diagram – Graphical visualization of a compressed air system.

Report – Full printable breakdown of the system and potential saving scenarios.

Calculators – Stand alone calculators for compressed air properties.

*Some of the tabs will be disabled until the System Setup is completed.

Additional Buttons

Book – The book will open a new window with the Compressed Air User Manual you are reading.

Gear – The gear wheel will navigate you to MEASUR’s global settings page.

Folder – The folder will navigate you to the assessment dashboard folder this assessment is in.

Home – The house will bring you to MEASUR’s home page.

System Setup

The system setup is where you enter the baseline data for your compressed air system. The system setup is broken up into five tabs, each with a related set of input fields to be filled out. Field by field help text is provided for each input field, it will appear in the help panel when an input field is clicked on.

Navigation

Use the second bar to navigate to different sections of the Setup. The tabs will be color coded to indicate the state of the corresponding tab data. Tabs will be disabled in the previous steps have errors in their data.

Assessment Basics – Select the units for the assessment.

System Information – Data entry relating to cost and operation.

Inventory – Add and manage individual compressors in your system.

Day Types – Identify day types matching your systems operation.

System Profile – Data entry relating to loading of the compressors for each day type.

Tab colors:

Green - Valid data entered for tab.

Red – Invalid or missing data entered for tab.

Yellow – Data entered outside of expected range.

Gray – Disabled tab, previous tabs are incomplete.

Data Entry

The screenshots below show how to enter data for the System Basics. Input fields will highlight red and an error message will appear if the data that is entered is invalid.

The screenshot shows a web form titled "SYSTEM INFORMATION". It is divided into two main sections: "SYSTEM INFORMATION" and "CARBON EMISSIONS".

SYSTEM INFORMATION

- Atmospheric Pressure:** A text input field containing "101.35" with a unit dropdown set to "kpaa". Below it is a blue link "Calculate from Elevation".
- Total Air Storage:** A text input field is highlighted with a red border. Below it is a blue link "Calculate Air Storage Capacity".
- Error Message:** A red horizontal bar with the text "Value Required" is displayed below the Total Air Storage field.
- Is a target pressure sequencer used?:** A dropdown menu with "No" selected.

CARBON EMISSIONS

- Zip code:** A text input field containing "00000".
- eGRID Subregion:** A dropdown menu with "US Average" selected.
- Total Emission Output Rate:** A text input field containing "401.07" with a unit dropdown set to "kg CO₂/MWh".

Use the left panels in the System Basics to enter the data for your existing compressed air system.

Links underneath input labels can be used to calculate the values of corresponding inputs.

The right side panel contains help text. The panel will show help relating to the field you are currently focused on.

The screenshot shows a help panel titled "HELP". It contains the following text:

System Information Help
Enter data related to entire compressed air system

Total Air Storage
The volume of air that the entire compressed air system can store, including receivers and distribution pipes.

Inventory

In the “Inventory”, you enter details about each compressor in your system. A database of existing compressors can be used to populate the data fields.

COMPRESSOR INVENTORY

Compressor Name: Compressor A
Description:
[Set Data From Existing Compressor](#)

NAMEPLATE DATA

Compressor Type: Single stage lubricant-injected rotary screw
Motor Power: 100 hp
Full Load Operating Pressure: 115 psig
Rated Capacity at Full Load Pressure: 457 acfm
Full Load Amps: 119 amps
Total Package Input Power: 89.5 kW

CONTROLS

Control Type: Inlet modulation with unloading
Unload Controls
Unload Point Capacity: 50 %
of Unloading Steps: 2
Automatic Shutdown Timer: No
Unload Sump Pressure: 15 psig

> INLET CONDITIONS
> DESIGN DETAILS
> PERFORMANCE POINTS

Use the left side panel to fill out the details of the selected compressor.

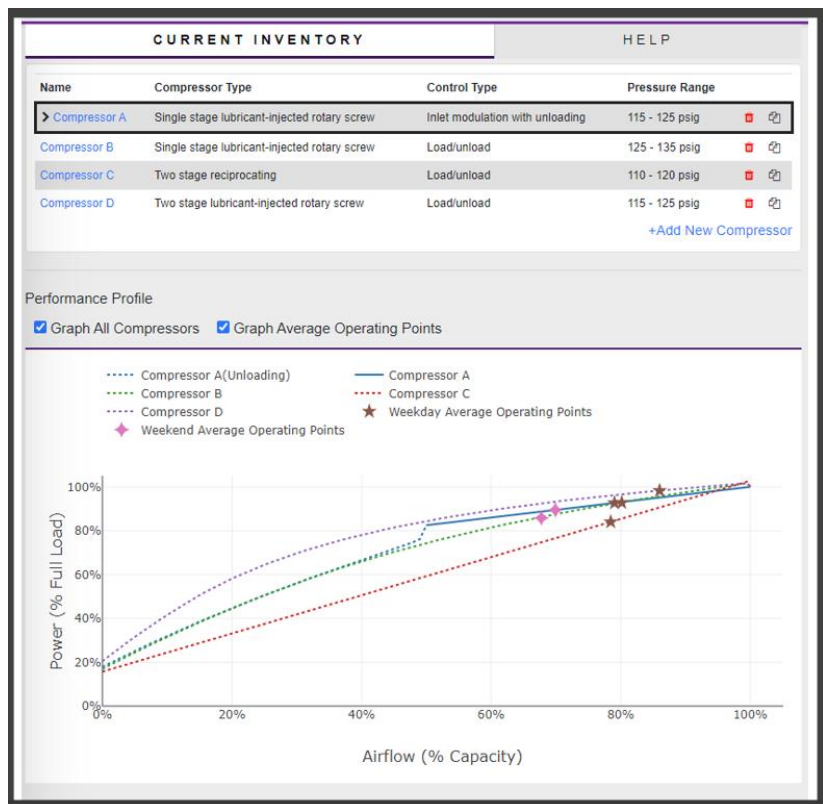

Click “Set Data From Existing Compressors” to view a list of the compressors to choose from.

The input fields shown will change depending on the Compressor and Control type selected.

The right hand panel will provide a table of the compressors in your system as well as a graphical performance profile.

Clicking on the name of a compressor will select it for editing in the left panel.

Under the “Help” tab there will be field by field help text that will update as fields in the left hand panel are selected.

Day Types

Use day types as a way to generalize your daily operations into sets of similar periods. Clicking the “Find Day Types With Data Explorer” button will take you to the Data Explorer module. Once there you can load compressor data and conduct an analysis to create day types that can then be applied to this assessment. That data can then be used to fill out the performance profile data in the next section.

DAY TYPES

Day Type	Operating Days	
Weekday	256	
Weekend	104	
Total Annual Days	360	
Total Down Days	5	

[+Add Day Type](#)

Find Day Types With Data Explorer

System Profile

The “System Profile” is where you enter operations data for each day type. You’ll need to complete “Setup Profile” before analysing your system.

Navigation

The system profile has multiple tabs providing different information corresponding to the profile.

- **Setup Profile:** Data entry relating to compressor state at a selected time interval for each day type
- **Profile Summary:** A table of calculated compressor details at each hour interval for each day type.
- **Graphs:** Graphical representation of the compressors by hour interval for each day type.
- **Annual Summary:** An annual summary of each day type and system totals. Can be filtered by compressor.
- **Compressor Summary:** A power summary of each compressor in the system.

Setup Profile

The “Setup Profile” section provides a variety of options for adding performance profile data for your compressor system. Each day type will need to be filled out for analysis.

Compressor Ordering (No Sequencer)		FLP	1	2	3	4	5	6	7	8	9	10	11	12	13	14	15	16	17	18	19	20	21	22	23	24
Compressor A	115	2	2	2	2	2	2	2	2	2	2	2	2	2	2	2	2	2	2	2	2	2	2	2	2	
Compressor B	125	1	1	1	1	1	1	1	1	1	1	1	1	1	1	1	1	1	1	1	1	1	1	1	1	
Compressor C	110	4	4	4	4	4	4	4	4	4	4	4	4	4	4	4	4	4	4	4	4	4	4	4	4	
Compressor D	115	3	3	3	3	3	3	3	3	3	3	3	3	3	3	3	3	3	3	3	3	3	3	3	3	

Profile Data		Explorer	1	2	3	4	5	6	7	8	9	10	11	12	13	14	15	16	17	18	19	20	21	22	23	24
Compressor A	% Capacity	Capacity % 1	82	82	82	82	82	82	82	82	82	82	81	82	82	81	81	81	79	82	82	82	82	83	83	83
Compressor B	% Capacity	Capacity % 2	73	73	73	73	72	73	74	73	71	71	70	71	71	71	81	85	86	86	76	74	74	74	74	74
Compressor C	% Capacity	Capacity % 3	73	73	73	73	72	73	74	73	71	71	70	71	71	71	81	85	86	86	76	74	74	74	74	74
Compressor D	% Capacity	Capacity % 1	0	0	0	0	0	0	0	0	0	0	0	0	0	0	0	0	0	0	0	0	0	0	0	
		Capacity % 2																								
		Capacity % 3																								
		Capacity % 4																								

The “Compressor Ordering” table will set the order in which the compressors are turned on as needed. Click the purple buttons to toggle the compressors on/off at a given time interval. If the system has a sequencer then dropdowns will show and update accordingly.

The “Profile Data” section is where you enter the measured compressor data at the given time intervals for the selected day type from the dropdown at the top. Use the “Profile Data Type” dropdown to select the type of data you have measured.

If the Data Explorer was used to determine the day types, then you can use the data from the explorer to fill out the profile with the dropdown by selecting the data that corresponds to the compressor.

Assessment

The assessment section of the module allows you to explore how modification scenarios for your system may provide cost, energy and emissions savings. Your baseline must be setup completely prior to making modifications.

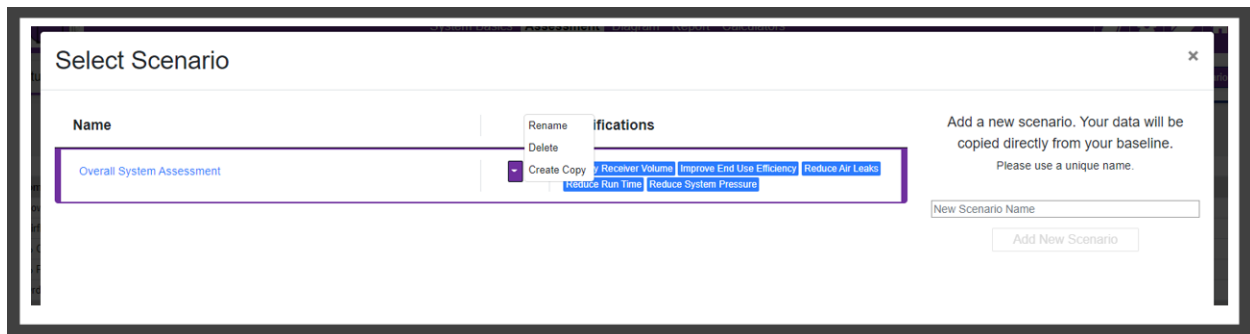

Navigation

As with the System Setup, there is a secondary set of tabs.

- **Setup Profile:** Is where you apply modifications to the system.
- **Profile Summary Table:** A table of calculated compressor details **with the modifications applied** at each hour interval for each day type.
- **Profile Summary Graphs:** Side by side graphical representations of the profile summary for the baseline setup and the applied modifications.

Multiple scenarios can be created, the current “Selected Scenario” will be displayed on the right hand side of this bar. The “View / Add Scenarios” button opens up a modal used to manage your scenarios:

The modal can be used to:

- Create new scenarios
- Create copies of existing scenarios
- Delete or rename scenarios
- Selecting scenarios for viewing and modifying

Setup Profile

Use the “Setup Profile” to apply different modifications to your system for potential savings.

The 'Setup Profile' interface includes tabs for 'Setup Profile', 'Profile Summary Table', and 'Profile Summary Graphs'. The main section is titled 'SELECT POTENTIAL ADJUSTMENT PROJECTS' with a subtitle: 'Select potential adjustment projects to explore opportunities to increase efficiency and the effectiveness of your system.' There is an 'Add New Scenario' button. The 'Modification Name' field contains 'Overall System Assessment'. Three projects are listed, each with a dropdown menu on the right:

- Reduce Air Leaks** (dropdown: 1):
 - Implementation Cost: 500
 - Leak Flow: 250 acfm
 - Leak Reduction: 75 %
- Add Primary Receiver Volume** (dropdown: 2):
 - Implementation Cost: 2000
 - Existing air storage capacity: 1,000 gal
 - Increased Volume: 1000 gal
 - Proposed air storage capacity: 2,000 gal
- Reduce System Air Pressure** (dropdown: 3):
 - Implementation Cost: 100
 - Average System Pressure Reduction: 5 psig

A list of potential savings projects is provided.

Use the dropdown on the right hand of the list to set the order in which the projects will be implemented.

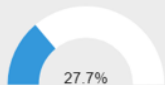

Each list item will provide input fields to modify the scenario.

The “Results” tab will show the calculated results and savings of the modified scenario.

The “Compressor Profile” tab will provide an updated compressor profile as well as the baseline.

Field by field help text will display in the “Help” panel as input fields are clicked on.

Use the “Notes” tab to add notes for this modification that will be added to the report.

MODIFICATION RESULTS		COMPRESSOR PROFILE	HELP	NOTES
		All Day Types		
Baseline		Overall System Assessment		
Percent Savings (%)		 27.7%		
Auxiliary Power Energy Use	---	57,600 kWh		
Flow Reallocation Energy Savings	---	109,114 kWh		
Additional Receiver Volume Energy Savings	---	9,078 kWh		
Improve End Use Efficiency Energy Savings	---	55,900 kWh		
Reduce Air Leaks Energy Savings	---	296,925 kWh		
Reduce Run Time Energy Savings	---	54,430 kWh		
Reduce System Air Pressure Energy Savings	---	59,713 kWh		
Peak Demand	496.82 kW	429.47 kW		
Annual Energy	2,266,509 kWh	1,738,949 kWh		
Peak Demand Savings	---	67.36 kW		
Annual Energy Savings	---	527,560 kWh		
Auxiliary Power Cost	---	-\$3,801.60		
Flow Reallocation Savings	---	\$7,201.54		
Additional Receiver Volume Savings	---	\$599.16		
Improve End Use Efficiency Savings	---	\$3,689.37		
Reduce Air Leaks Savings	---	\$19,597.04		
Reduce Run Time Savings	---	\$3,592.40		
Reduce System Air Pressure Savings	---	\$3,941.07		
Peak Demand Cost	\$29,809.43	\$25,767.96		
Annual Energy Cost	\$149,589.62	\$114,770.63		
Annual Cost	\$179,399.05	\$140,538.59		
Peak Demand Cost Savings	---	\$4,041.48		
Annual Energy Cost Savings	---	\$34,818.99		
Annual Cost Savings	---	\$38,860.47		

Report

The report is a printable summary of the baseline and scenarios you have created in the assessment. Tables and graphs are provided to analyze the impacts the changes have on each scenario comparatively. There is a secondary set of tabs to navigate to different pieces of the report. The “Print” button in the top right hand corner will generate a PDF report.

- Executive Summary: Results summary with baseline usage and savings for each modification scenario.
- Payback Details: Calculated table of payback period based on cost savings and implementation costs.
- Performance Profiles: Performance profile graphs and compressor summary.
- System Profiles: Profile tables and graphs based on day type interval data for the baseline and modifications.
- Report Graphs: Stacked bar chart and scenario savings for each modification project.
- Input Summary: A table of the input data for the baseline and each scenario.
- Facility Info: The facility information provided for the folder that this assessment was created in.
